

Tips and Tricks to improve system performance and save disk space.

Pete Massiello
iTech Solutions
pmassiello@itechsol.com
203-744-7854

iTech Solutions because IBM i (AS/400s) don't come with System Administrators

In this session

In this presentation we will discuss the ways to clean up our disk space, and what you can do to improve performance. While the IBM i may manage itself in some areas, there are many optimization and cleanup techniques that are part of IBM i, yet most shops don't spend the time and effort to implement them. We will learn the "tricks" that can help you reduce your disk I/O, reduce disk utilization, reduce memory faulting, and improve system performance.

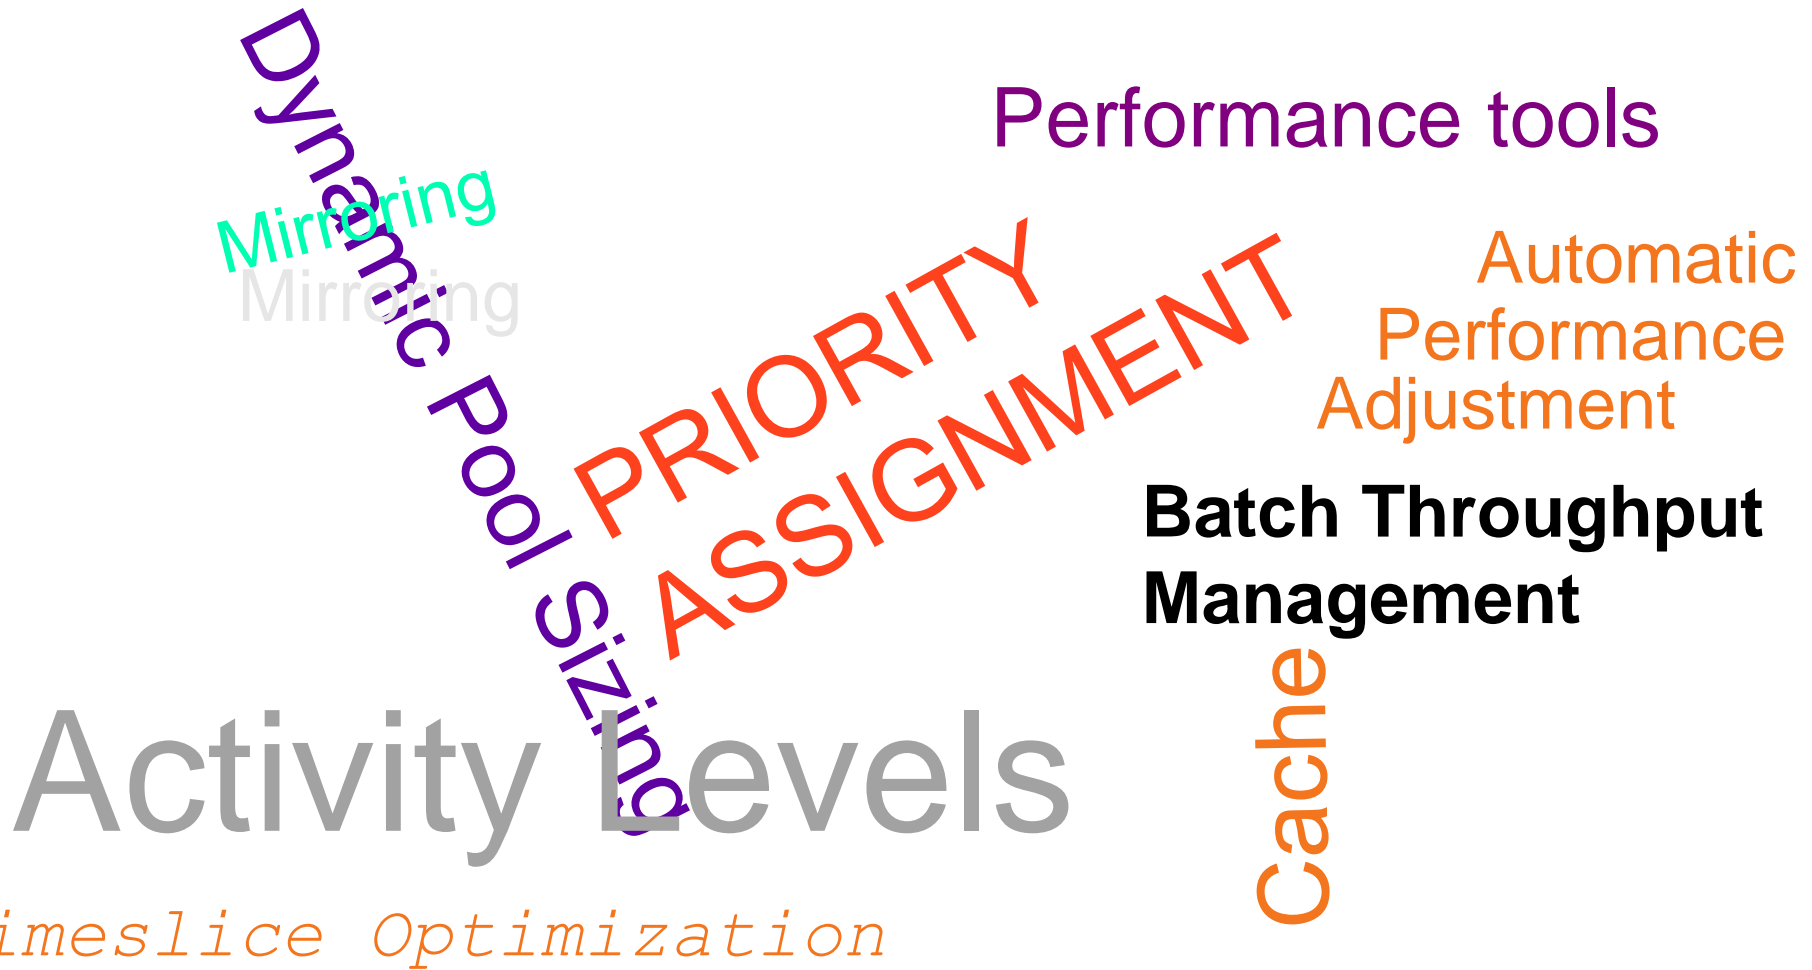

What We'll Cover ...

- Performance Terms and Problems
- Physical Files
- Logical Files
- Programs
- Other Objects
- Performance and Expert Cache
- Basic Cleanup and Why
- Save Files, Reclaim Storage, and Spool Files
- DISKTASKs
- What to do Tomorrow
- Wrap-up

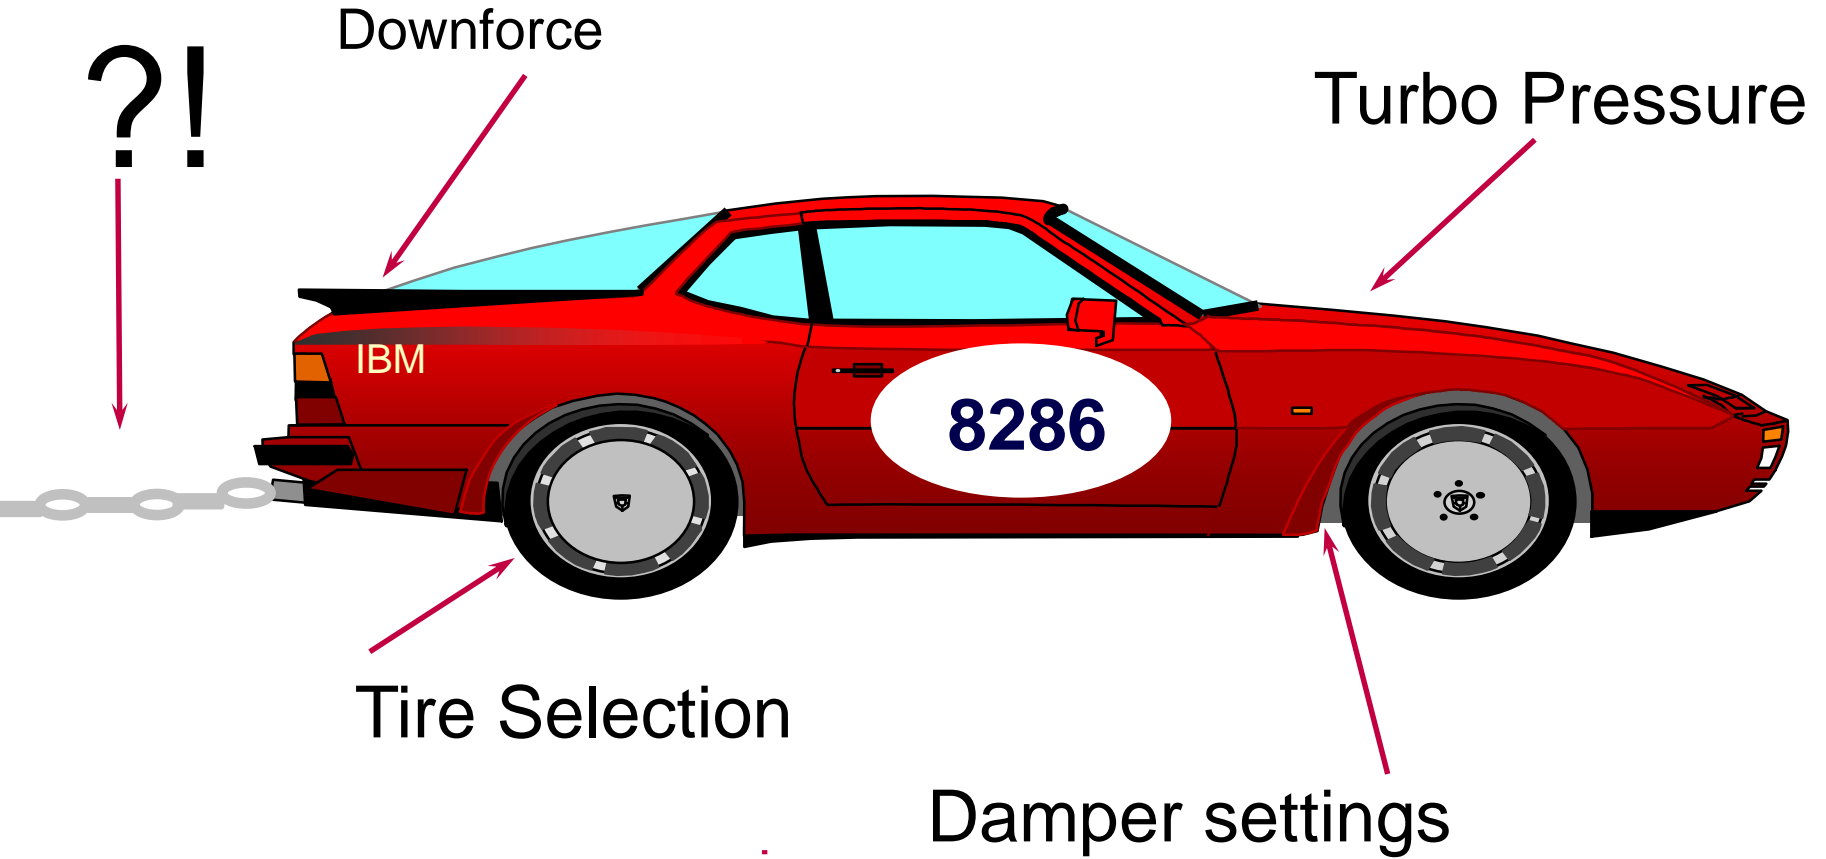

What We'll Cover ...

- Performance Terms and Problems
- Physical Files
- Logical Files
- Programs
- Other Objects
- Performance and Expert Cache
- Basic Cleanup and Why
- Save Files, Reclaim Storage, and Spool Files
- DISKTASKs
- What to do Tomorrow
- Wrap-up

Is This Where to Start Performance Tuning?

Identifying the Problem

Identifying the Problem (cont.)

What Performance can you expect?

Why We Should Be Cleaning

Hidden costs.

“Having a lot of storage is like having children. It can cost you almost nothing to have a child, but the upkeep costs a lot. In fact, Aberdeen’s research and other people’s research show that there can be an order of magnitude difference between the cost to acquire the storage and the cost to maintain it.”

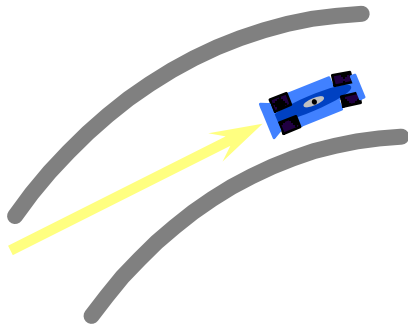

Dan Tanner

Analyst with Aberdeen Group

What We Will Discuss

Removing Excess Baggage

Optimization

Tuning

What We'll Cover ...

- Performance Terms and Problems
- Physical Files
- Logical Files
- Programs
- Other Objects
- Performance and Expert Cache
- Basic Cleanup and Why
- Save Files, Reclaim Storage, and Spool Files
- DISKTASKs
- What to do Tomorrow
- Wrap-up

Generate List of Files

Reorganize While Active

The screenshot shows a terminal window titled "Session B - [24 x 80]" with a menu bar (File, Edit, View, Communication, Actions, Window, Help) and a toolbar. The main content displays the OS/400 Main Menu with the following options:

- 1. User tasks
- 2. Office tasks
- 3. General system tasks
- 4. Files, libraries, and folders
- 5. Programming
- 6. Communications
- 7. Define or change the system
- 8. Problem handling
- 9. Display a menu
- 10. Information Assistant options
- 11. iSeries Access tasks

- 90. Sign off

At the bottom, the command prompt shows: `Selection or command
==> RRGZPFM FILE(ITECHDB/BIGFILE) RBDACCPH(*OPTIMIZE) ALWCANCEL(*YES) LOCK(*SHRUPD)`

A red warning icon (exclamation mark in a blue square) is overlaid on the screen with the text "Heads-Up" below it. To the right of the icon, red text reads: "Requires file to be journaled. And, let's discuss the LOCK Parameter."

At the bottom of the terminal window, the status bar shows: `MA b` on the left, `20/007` on the right, and `Printed 1 screen(s).` on the far left and `Win2PDF on PDFFILE:` on the far right.

Locked, Others Can Read

Permanently Apply PTFs

When a PTF is applied, it completely replaces the affected objects in the product. PTFs can be applied temporarily or permanently. If they are applied temporarily, the replaced objects are saved by the system and can later be restored to the product by the Remove Program Temporary Fix (RMVPTF) command. If PTFs are applied permanently, the replaced objects are deleted from the system.

PTFs You Have Downloaded

- Have cover letters stored as members in QGPL/QAPZCOVER
- Save Files in QGPL
 - QMF*
 - QSI*
 - QSF*
- Use DLTPTF

DLTPTF

Delete Program Temporary Fix (DLTPTF)

Save Files

- Can be a big payoff, BUT ...
- You need to decide which ones to keep and which ones to delete.
- Find out Date last used, Date when created, and by what UserID.
- Don't delete any of them in Q libraries.
- DSPSAVF to help you decide.
- Backup to Special Tape before delete.

Get the Directory Information

- The Retrieve Directory Information (RTVDIRINF) command is used to collect attributes for directories and files in the Integrated File System. The collected information is stored in database files that are named using the information file prefix specified by the INFFILEPFX parameter. The files are created in the library specified by the INFLIB parameter, defaults to QUSRSYS.
- You will want to run this in batch.
- You can run the Print Directory Information (PRTDIRINF) command to print reports using the retrieved directory information.

Get the Directory Information (cont.)

7 Key Points to Take Home

- Generate a list of files on your system using the DSPFD on slide 10, and then select the largest files with deleted records as the SQL/Query criteria on slide 11. You have your files with the most deleted records, now we know which files need to be reorganized.
- When reorganizing files, don't forget that the ALWCANCEL(*YES) provides the reorganize while active function.
- Figure out which logical files can be shared by examining the keys of the logical files and creating the superset keys first and the subset keys last.

7 Key Points to Take Home (cont.)

- Use Expert Cache to have the next records in memory before you use them, by changing the paging option of the memory pool to *CALC.
- Save files are always big disk hogs; use the procedures on slides 55 and 56 to identify your culprits.
- Automate the collection of object information by setting up weekly disk collections.
- Run Reclaim Storage every 6 – 12 months to find damaged objects, identify offend objects, and reorganize the QADB* files in QSYS.

Your Turn!
